Active Transport (pgs. 46-47)

Small particles, such as _____, _____, and oxygen -
diffuse freely _____ and _____ of cells. No _____ is needed.
This process depends on _____.

However, _____ particles, which are used for energy,
must move from low to _____ concentration.

It goes against diffusion. It requires the use of
_____. It also requires _____
that are embedded in the cell membrane to help
move glucose and other particles through the
cell membrane. This is called _____.
